

# Speciality Valves & Actuators

The ATC Actuator offers:

- The most compact actuator available.
- Simple highly efficient operating mechanism.
- Output torques up to 500.000 Nm/ 4,425,000 in-lbs.
- Standard hydraulic supply pressures up to 345 Barg/5000 psig.
- Pneumatic supply range from LP instrument air to HP line gas.
- Spring Return and Double Acting.
- HIPPS & ESD design and reliability.
- Minimal displacement requirements.
- Subsea, splash zones and harsh topside environmental sealing.
- Lifetime lubrication.
- Maintenance Free.

## Actuator Technology Company

The ATC actuators are manufactured in compliance with the ISO 9001 2000 quality procedures and are installed worldwide on harsh & critical off shore applications and subsea projects. Our impressive track record with the major end users and contractors confirms the high-end quality of the ATC organization and its revolutionary actuator design.

The Actuator Technology Company (ATC), based in The Netherlands, has been founded to accommodate the specific market need for a compact spring return actuator to operate turn valves. Applications that particularly benefit from our compact design are those where installation space is (extremely) limited, like on topsides, high-pressure manifolds, turret & riser areas, loading buoys as well as subsea PLEMS.
