## PMI Testing

### UTILISING THE TITAN S1 ANALYSER XRF (X-RAY FLUORESCENCE SPECTROMETER)

Positive material identification (PMI) is an essential non-destructive testing (NDT) method utilised to verify that supplied materials conform to the proper standards and specifications.

As a result, assurance can be gained that the chemical makeup of the metallic parts has the correct percentage of key elements.

### BENEFITS OF OUR PMI TESTING

- Highly specific and accurate results.
- Assurance for verification of specialty metal parts.
- Quick results for product verification and sorting of product that may have been inadvertently mixed.
- Fast test times and our long-standing experience.
